## 1986 SUMMARY

### HIGHLIGHTS

U.S. prices are published for 1981 through 1986. State estimates of prices received by farmers are published for crops (1985-86), vegetables (1984-86), and livestock and poultry (1986). Prices paid by farmers for feed and fuel are included by State for January and February 1986. Prices paid data by region for 1986 are published for feed, fuel, and fertilizer. U.S. price indexes for both prices received and paid are included for 1976-86.

Crop prices for 1986 are subject to revision. In addition, fruit and vegetable prices for 1985 could change. Prices received for livestock and poultry, and all prices paid are considered final. Price revisions are published in the monthly issue of Agricultural Prices.

## 1986 AGRICULTURAL PRICES ANNUAL SUMMARY

The 28th Annual Summary of Agricultural Prices contains the series of prices farmers received for commodities sold as well as prices paid for production input goods and services. Prices are weighted and aggregated into price indexes. These indexes provide measures of relative price changes for agricultural outputs and inputs.

AGRICULTURAL COMMODITY PRICES: Prices received by farmers represent averages received by farmers at the point of first sale for all grades and qualities of the commodity sold. Points of first sale by farmers range from bulk sales at the farm to packed and graded products delivered to a local market. For crops the price refers to all sales, regardless of the year harvested. The average price concept is that price which would result from dividing the total dollars received by all farmers, before any marketing charges are deducted, by the total quantity sold. Contract sales are reported in the month of settlement, not when agreements are made. Transactions are finalized when delivery and payment are completed. Prices are on an "as sold" basis, with the following exceptions: milk is priced f.o.b. plant or receiving station; apple, pear, and peach prices are equivalent packinghouse-door returns for California, Oregon, New York (apples only), and Washington, and point of first sale for all other States. Vegetable prices are f.o.b.

MONTHLY prices are based on all sales of the commodity during the entire month. Exceptions are cottonseed, hay, eggs, and turkeys which are based on the 5-day period centered on the 15th of the month. State commodity prices are estimated for months when 0.5 percent or more of the annual sales occur. Weights for computing monthly United States average prices from State average prices are based on estimated marketings during the month.

MARKETING YEAR AVERAGE prices are weighted average prices for crops, livestock, and poultry items sold during the marketing year. Marketing years are shown on pages 29 and 30. State marketing year average prices are computed by weighting monthly prices by the estimated percentage of sales each month during the marketing year. U.S. marketing year average prices for corn, sorghum, oats, barley, wheat, rice, soybeans, flaxseed, sunflower, peanuts, and upland cotton are computed by weighting U.S. monthly prices by monthly marketings for the U.S. marketing year. Other crops, livestock, and poultry are computed by weighting State marketing year average prices by the estimated quantity sold in each State.

The preliminary marketing year average price estimates for 1986 are based on price data through February 1987 for all field crops except: potatoes and sweetpotatoes -- based on data through December 1986; cotton -- based on data through March 1987; and tobacco -- based on data through April 1987. Marketing years for fruit, vegetables and nuts vary by State and commodity. Allowances are made for that portion of the crop yet to be marketed during the current marketing year for all commodities except cotton.

State and U.S. monthly and marketing year average prices for crops are open-market prices and do not include Government program payments or allowances for unredeemed loans and purchases by the Government. State marketing year prices for rice reflect outstanding loans prior to 1986. Government payments to farmers are included in farm income accounts as a separate item and thus are excluded from price calculations.

CALENDAR YEAR AVERAGE prices are unweighted averages of the January through December monthly prices. Calendar year average prices for milk cows at the State level are the simple averages of the four quarters. The U.S. calendar year average price for milk cows is computed by weighting the State calendar year average prices by the January 1 inventory of milk cows on farms.

Monthly and marketing year average crop prices for 1985 are final except for fruit. Crop prices for 1986 are subject to revision. These revisions will be published in the monthly issues of AGRICULTURAL PRICES. Livestock, livestock products and poultry prices are final for both 1985 and 1986. Prices for agricultural commodities may be revised during the Agency's five-year review of production estimates. Changes that result from this review are usually small and, generally, are the result of reweighting State prices to the U.S. level.

AGRICULTURAL INPUTS: The Index of Prices Paid by Farmers measures changes in the prices paid for goods and services used in production of crops and livestock and family living. The index is made up of 5 major components. In terms of total farm expenditures, the production component accounts for nearly 60 percent of the total and the family living component represented by the Bureau of Labor Statistics' Consumer Price Index (CPI-U) accounts for about 30 percent of the index. The remaining three components are: (1) interest charges per acre on mortgage indebtedness secured by farm real estate; (2) taxes payable per acre on farm real estate; and (3) wage rates paid to hired farm labor. Prices Paid Indexes are not seasonally adjusted and there are no adjustments for quality changes.

The two components of a price index are price and quantity. Both prices received and prices paid indexes are fixed weight indexes. Weights for the prices paid indexes are based on average farm expenditures during 1971-73. Indexes are published on a 1977=100 base and a 1910-14=100 base. The Office of Federal Statistical Policy and Standards Directive No. 5 directed that the 1977 base year be in use by January 1982 for Federal Government general-purpose index numbers. The 1910-14=100 base is required under the Agricultural Adjustment Act of 1938 as amended. The Index of Prices Paid by Farmers for Commodities and Services, Interest, Taxes and Farm Wage Rates on the 1910-14=100 base is called the Parity Index. The Parity Index reflects relative price change but does not take into account the technological advancements and increased productivity of American agriculture.

The number of input items consumed on farms is so extensive that it is not feasible to collect price data for all of the inputs. Therefore, about 200 selected items are priced to represent groups of similar items purchased which make up the major production expenditures.

Items on the questionnaire are described in the simplest way consistent with definite identification. Firms are requested to report the prices for the item most commonly sold which meets the general specification on the questionnaire. Reported data are summarized to regional estimates and then weighted to U.S. prices. Weights are based on available consumption or expenditure information.

Prices are published in Agricultural Prices in the same month as the survey. Regional prices are published for feed, fuel, and fertilizer. Only U.S. prices are published for the remaining items surveyed.

The production input prices published in this Annual Summary are considered final and usually are not subject to revision since additional information is not available for most items. Components of the production index are not likely to be revised since prices are seldom revised. However, the overall Index of Prices Paid Including Taxes, Interest and Wages is subject to change as annual revisions are usually made in the taxes, interest and cash rent and farm services components of the index.

PARITY RATIO: The Parity Ratio is the ratio of the Prices Received Index, 1910-14=100, to the index of Prices Paid by Farmers for Commodities and Services, Interest, Taxes and Wage Rates on a 1910-14=100 base. The Parity Ratio is a measure of price relationships; not a measure of farm income, of farmer's total purchasing power, or of farmer's welfare. The well-being of the farm community depends upon a number of factors other than price relationships such as changes in production efficiency and technology, quantities of farm products sold, and supplementary income, including income from off-farm jobs and federal farm programs.

RATIO: The ratio of the Prices Received Index to the Price Paid Index on the 1977 base provides an indication of the change that has occurred in the prices farmers receive for their commodities relative to the change in the cost of inputs using 1977 as the reference year. When this ratio is greater than 100 percent, it implies that farm commodity prices have increased at a faster rate than farm input prices. When the ratio is less than 100 percent, farm input prices are increasing at a more rapid pace than farm commodity prices.

## ACKNOWLEDGEMENT

The State, regional and U.S. average prices for agricultural commodities and farm production inputs are based on voluntary reports from agribusiness firms, merchants, dealers, and farmers throughout the Nation. These data are collected at regular intervals using mailed inquiries and personal enumeration. The cooperation and suport of all the individuals and firms that have provided data is greatly appreciated.
